

Acute MI Outcomes in NYS & the Use of NYS Data for Quality Improvement Initiatives

NYS Report on Mortality after AMI: 2015

- First NYS public report of hospital risk-adjusted 30-day mortality rates.
- Similar to the reports provided in January 2017 to hospitals.
- Primary data source is SPARCS.
- Developed by the NYSDOH, OQPS Cardiac Services Program with the guidance and advice of the NYS Cardiac Advisory Committee

Other Data-Driven QI Activities

- Statewide AMI profile
 - Focus on regional variation in processes and outcomes
- STEMI Feedback report
 - Uses PCIRS to provide hospitals with data on outcomes and processes for PCI patients with STEMI, benchmarked against NYS data
